

SOFTWARE ENGINEER (Full time or part time)

"The software I develop gives patients more attention and better care. Patients are helped faster and fewer medication errors are made."

As a Software developer at RoboPharma in Waalwijk, you work in project teams on improvements to applications for our machines so that logistics processes in healthcare and in particular pharmacy are streamlined. As a result, for example, pharmacists spend as little time as possible on collecting the correct prescriptions and they can give more explanation and attention to the patient at the counter. Your work contributes to that!

Position

As a software engineer, you sometimes commit to a project for a new customer where the software still has to be linked to the new machines. Other times you work on improving and developing software components in installations in operation at existing customers. You have to deal with a lot of data that needs to be properly processed in systems and outdated codes that need to be improved so that applications continue to work. You consult within the team, but you also work independently a lot. And you are involved in implementation as well as testing and documentation, but also in maintenance and development. So very varied. You get a lot of freedom to develop good software and to keep learning yourself. And we listen to your own preferences for work. Together with the team, you ensure a good completion of the project. Every time again.

What do we offer?

RoboPharma is a fast-growing organization, but we continue to find the attention for our employees important. Your development as a person and developer is our top priority. In addition, you can count on:

- A full-time or part-time position in a young, ambitious and innovative company. Due to the different processes and people you work with, really no day is the same;
- An informal, no-nonsense work environment where results count, but above all where there is also respect for each other and a good, warm atmosphere;
- Fun moments with colleagues, such as fresh soup in the canteen every week, Friday afternoon drinks, annual BBQ and, if you want, a game of table tennis during the break;
- Possibility of flexible working hours and partially working from home (in consultation);
- Tangible applications that are close to users. Software for automation of business processes and control of mechatronics;
- Working with leading national and international companies in the Healthcare who are at the forefront of technical innovation;
- Access to a laptop and smartphone;
- A very good pension scheme, a travel allowance and 8% holiday allowance;
- Excellent other employment conditions, including a salary that matches your work and thinking level and experience.
- An annual contract with the intention of conversion to an indefinite period.

What do we ask?

You are someone who works well independently, likes to document, works in a structured way and likes to keep going until you (with colleagues) have solved a problem. In addition:

- You have a completed HBO or university education in Software engineering or through work experience comparable work and thinking level in software engineering;
- You have extensive experience as a Software Developer. You have knowledge of and experience with object-oriented design & development, Relational Databases, SQL and version control. You work independently in C#.NET with techniques such as WPF, WCF, ORM, LINQ and Microservices;
- You have a good command of the Dutch and English language;

- Do you have experience with UML reading, Serial communication, Nhibernate, JSON/Rest, SOAP XML, Swagger, Docker, Kubernetes and Visual Studio? Then that's a good thing!

Company profile

RoboPharma is a Dutch company active in the development, implementation, maintenance and evolution of software solutions for logistics processes in healthcare, especially in pharmacy chains. Since 2004, we have been the market leader in the field of pharmacy automation in the Netherlands. Extensive knowledge and experience has been gained in streamlining complex processes in the healthcare sector with hardware and software solutions. RoboPharma is part of Capsa Healthcare from Columbus USA, an international, dynamic and growing company.

Our software department of approximately 15 employees employs different people in terms of age, experience, education, personal interests and background. With us, you can really be yourself. And one thing is certain; together we share a passion for software development!

Procedure, assessment and coaching

Do you also strive for a sustainable employment relationship and personal development?

In two (video) meetings, we discuss your wishes and the possibilities and we ensure that you get a good picture of the position, organization and future colleagues. We are then happy to invest in an assessment in which an external specialist can see how well you fit in with us. This assessment is for you and forms the basis for your further career development. You will be supported in our organization by your internal manager and an external, professional coach

Interested?

Do you want to investigate whether your future lies with RoboPharma? Then we would like to receive your resume and motivation letter at sollicitatie@robopharma.com. If you have any questions or would like more information, please call Karin van Roij, 06-30374207.

Acquisition in response to this vacancy is not appreciated.
